Product Science
Scientific Curator - Contract role
Mountain View, CA, United States

We're looking for detail-oriented scientists with a knack for evaluating and summarizing complex technical literature. Your work could help millions of people understand and interpret their genetic information and use it to make impactful life changes.

Note: This is a six month contractor position.

Who we are
23andMe’s mission is to help individuals and researchers access, understand, and benefit from the human genome. We are a group of passionate individuals pushing the boundaries of what’s possible to help turn genetic insights into better health and personal understanding.

Who you are
You have a passion for science and believe that it is important to make genetic information accessible, relatable, and useful to everyone. You are comfortable evaluating findings from scientific studies, have a high quality bar, and are a stickler for detail. You are preferably an expert in the field of genetics; otherwise well versed in another area of human biology.

What you’ll do
Identify, critically evaluate, and record the findings of scientific papers
Support product feasibility and regulatory submissions with QMS-compliant documentation

We hope you have
- Masters or PhD in Molecular Biology/Genetics/Bioinformatics/Biochemistry or equivalent
- At least two years of research laboratory and/or clinical experience in human genetics
- Familiarity with statistical analysis and study design in the context of critically evaluating scientific findings
- Experience working effectively in a dynamic, fast-paced, and interdisciplinary environment
- Experience using public databases, genomic tools, and online scientific resources
- Impeccable attention to detail and an appreciation for process
- An ability to be proactive, thorough, and independent
